Grid Anatomy

A grid is an organized collection of results from system-defined and user-defined search criteria.

1. **Headings** – Names of columns that contain information. Right-click on a column heading to access the grid action menu.
2. **Quick Field Chooser** – Used to add or remove columns in a grid.
3. **Filters** – Specific criteria chosen to include or exclude search results when customizing a grid.
4. **Footers & Group-Footers** – Calculations based on search criteria and grouping displayed in a grid.
5. **Group By Box** – A way to group data together in a grid; using the group by fields allows you to group and sort by multiple columns.
6. **Sort** – A way to sort data, ascending or descending, in a grid.
